6/23/70

Note.  
decision  
inside

The attached list represents those patent applications which should be considered for foreign filing by June 30, 1970.

Since the list was typed, I have talked with Mr. Wayland concerning the clear aerosol shave cream and he recommends no foreign filing.

Case IV on the list covers a novel web tensioning device utilizing the "rolamite" concept involving an essentially frictionless support bearing. A tension roll is maintained at a preferred position to impart the desired tension to a web. Vertical movement of the web causing a fluctuation in tension is detected by the "rolamite" support and the feed rate of the web is regulated to reinstate the desired tension. A rough diagram of the tension bar and "rolamite" support is enclosed.
